### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

### **DETAILED ACTION**

This Examiner Amendment and Reasons for Allowance action is in response to the filing of 03/02/2011.

#### ***Allowance***

1. Applicant's arguments, with respect to 26-29, 38-41, 50, 26-38, 28, 30-37, 42-49 have been fully considered and are persuasive. Examiner withdraws all outstanding rejections to claims 26-50.
2. Claims 26-50 are allowed.

#### ***Examiner's Statement of Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method and a system for intrusion detection in a communication network, and in particular to an intrusion detection system based on pattern matching engine to capture potential attacks and a response analysis engine to eliminate false positive.

Independent claim 26 and 38 recites the uniquely distinct features of "a database storing attack signatures and for each of the attack signatures, a set of at least one corresponding response signature; and a response analysis engine triggered by said event, for selecting from the database, a selected set of at least one response signature corresponding to the at least one matched attack signature, and comparing, with the selected set of at least one response signature, response data being transmitted on

Art Unit: 2437

said network as response to said captured data and for correlating results of said comparisons with attack and response signatures for generating an alarm". The closest prior art, Tarquini (US 2006/0101353 A1) discloses detecting an intrusion to a node of a network computer. See Tarquini at Abstract. Databases 80A and 81A of Tarquini, however, merely store "known attack signatures, or rules, against which network frames captured thereby may be compared." Tarquini at [0027]. Tarquini does not describe that databases 80A or 81A also store "a set of at least one ... response signature" as recited in claim 26. Moreover, while paragraph [0048] of Tarquini mentions an outbound response signature maintained in a signature file, Tarquini does not disclose that a database stores "for each of the attack signatures, a set of at least one corresponding response signatures". That is, Tarquini does not disclose that there is a correspondence between each of some attack signatures and some response signatures. Instead, as explained below, Tarquini deals with attack signatures and response signatures that are independent from each other, unlike those recited in claim 26. Tarquini describes "detection of [an] inbound reconnaissance probe signature and a subsequent detection of an outbound response signature [which was] generated by the probed network stack in response to the probe packet." Tarquini at [0048]. Tarquini, however, does not disclose that first "an event [is generated] when a match between the captured data and at least one attack signature is found," and then "triggered by said event ... a selected set of at least one response signature corresponding to the at least one matched attack signature," is selected, and the steps of "comparing ... response data" and "generating an alarm" are performed. In Tarquini, the detection of an outbound response signature

Art Unit: 2437

is always performed and is not triggered by detection of a match between some inbound data and some attack signature. In fact, in Tarquini the reconnaissance probes are "indistinguishable from normal network traffic," and "appear to be legitimate TCP traffic, i.e. indistinguishable based on the inbound signature of the probe packet." Tarquini at [0041]. Thus, Tarquini "detect[s] reconnaissance probes ... by identifying the response to the packet probe by an outbound response signature." That is, Tarquini cannot distinguish a reconnaissance probe from legitimate traffic, and cannot generate an event in the manner recited in claim 26 merely by analyzing the inbound packets. Thus, Tarquini can only detect an attack after analyzing outbound response packets irrespective of any event.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reason for Allowance".
